

Energy Indicators for the Economic Dimension of Sustainable Development

Prof. Peter Taylor

Mainstreaming Energy Sustainable Development Goals (SDGs), Targets and Indicators into Statistical Programmes in Select African Countries

Addis Ababa, Ethiopia, 27-29 June 2016

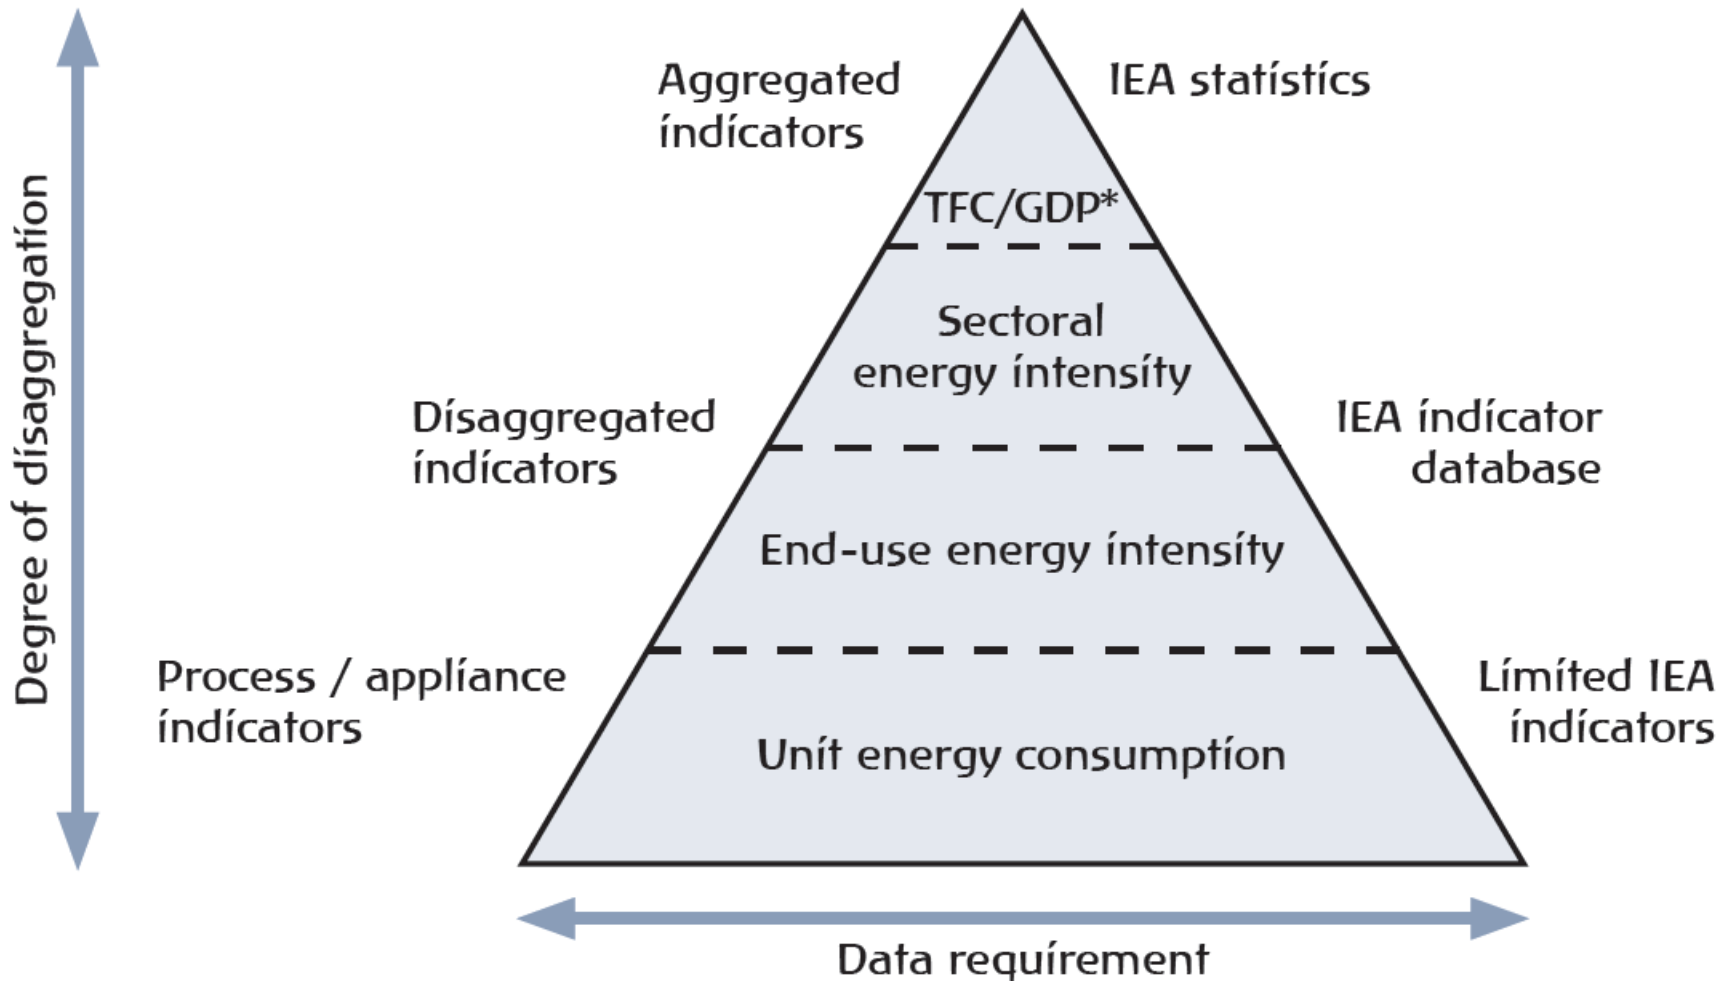

What are indicators?

- Tools to analyse e.g. energy resources, production and use and renewable energy and energy efficiency trends.
- Based on detailed statistics of energy production/use and economic activity
- Each indicator addresses one aspect of energy
- Indicators need to be looked at in groups to understand the full picture
- Indicators need to be read in the context of each country's economy and resources
- Indicators have proper applications and limitations
- Can inform policy decisions, help gauge policy effectiveness and unintended consequences

The indicators pyramid

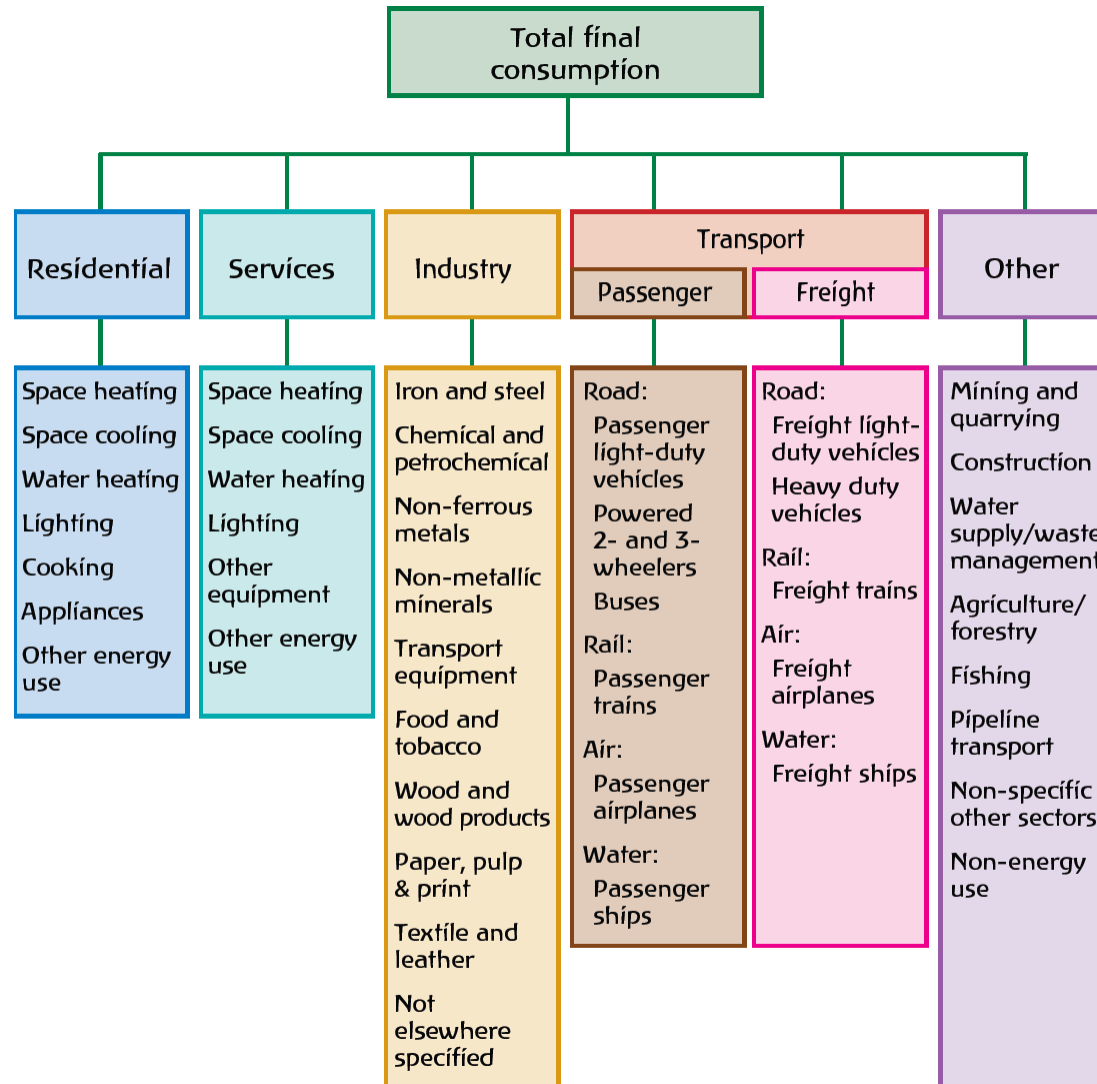

UNIVERSITY OF LEEDS

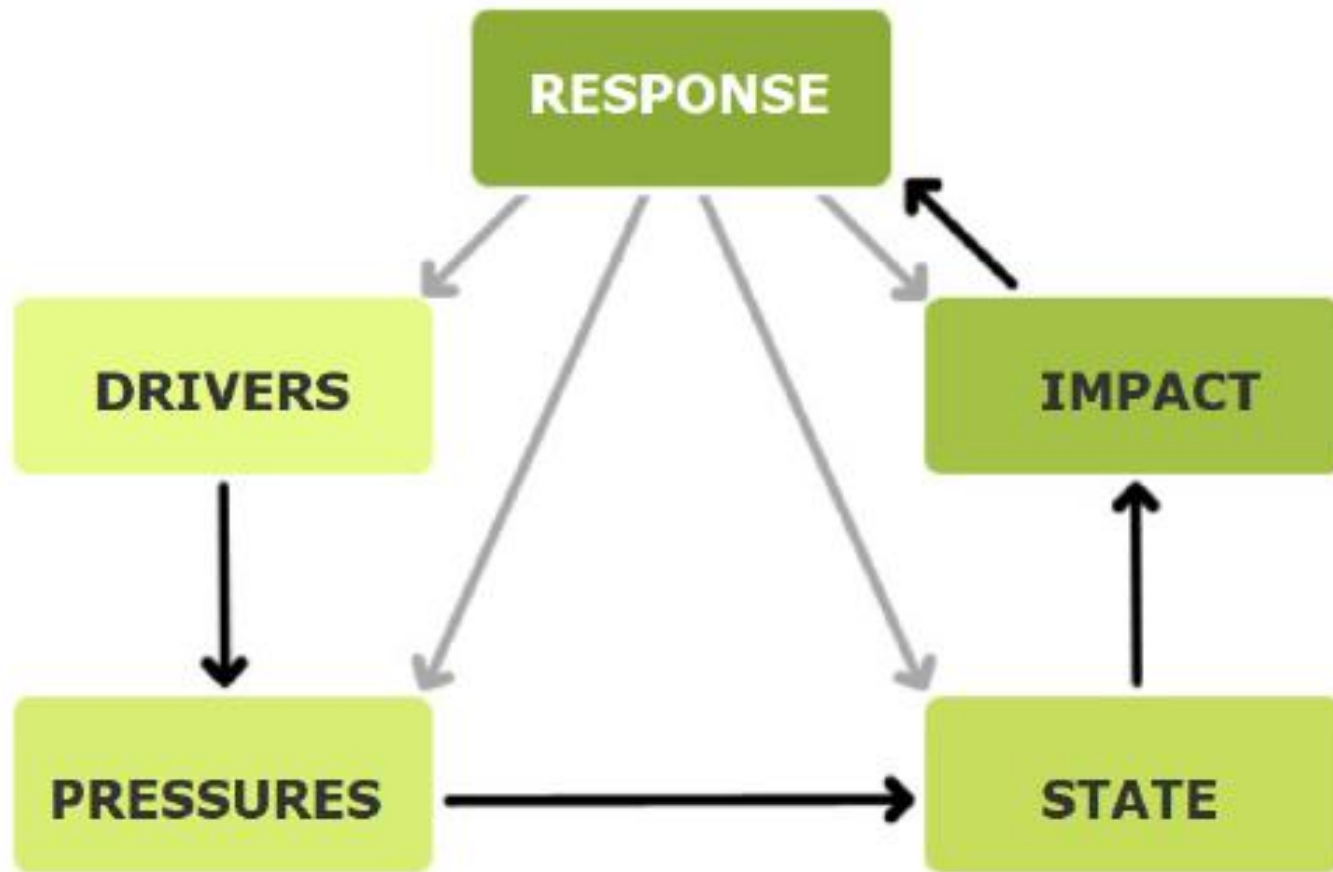

IEA end-use coverage for indicators

EEA DPSIR framework

UNIVERSITY OF LEEDS

The UN EISD initiative

UNIVERSITY OF LEEDS

- Work started by the UN in 1995.
- 5 agencies involved: UNDESA, OECD/IEA, IAEA, Eurostat, EEA.
- Initial project with 7 countries: Brazil, Cuba, Lithuania, Mexico, Russia, Slovakia, Thailand.
- Report on guidelines and methodologies published in 2005.

Economic Dimension of Sustainable Development

UNIVERSITY OF LEEDS

- Modern economies depend on a reliable and adequate energy supply.
- All sectors of the economy — residential, commercial, transport, service and agriculture — demand modern energy services.
- These services in turn foster economic and social development at the local level by raising productivity and enabling local income generation.
- Energy supply affects jobs, productivity and development.
- Electricity is the dominant form of energy for communications, information technology, manufacturing and services.

Economic indicators and themes

UNIVERSITY OF LEEDS

The economic indicators have two themes. Divided into a number of sub-themes:

1. Use and production patterns

Overall Use, Overall Productivity, Supply Efficiency, Production, End Use, Diversification (Fuel Mix) and Prices.

2. Security

Imports and Strategic Fuel Stocks.

Use and production patterns (1)

UNIVERSITY OF LEEDS

Overall Use

ECO1 Energy use per capita

- Energy use (total primary energy supply, total final consumption and electricity use)
- Total population

Overall Productivity

ECO2 Energy use per unit of GDP

- Energy use (total primary energy supply, total final consumption and electricity use)
- GDP

Overall use and productivity

UNIVERSITY OF LEEDS

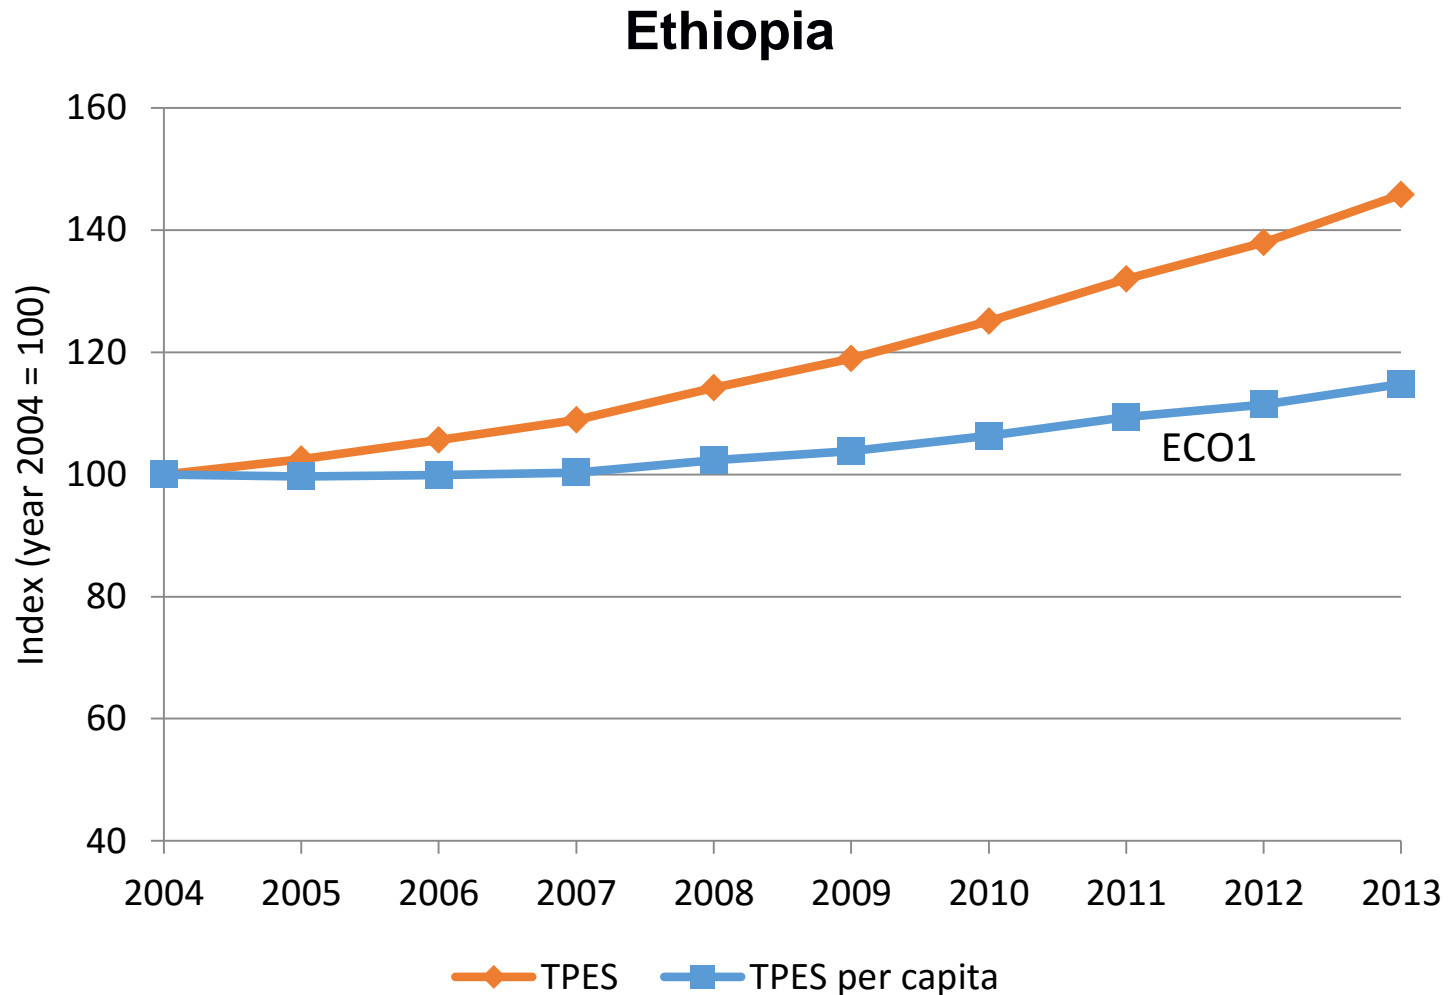

Ethiopia

Overall use: ECO1 - TPES per capita

UNIVERSITY OF LEEDS

Overall productivity: ECO2 – TPES per unit of GDP

UNIVERSITY OF LEEDS

Supply Efficiency

ECO3 Efficiency of energy conversion and distribution

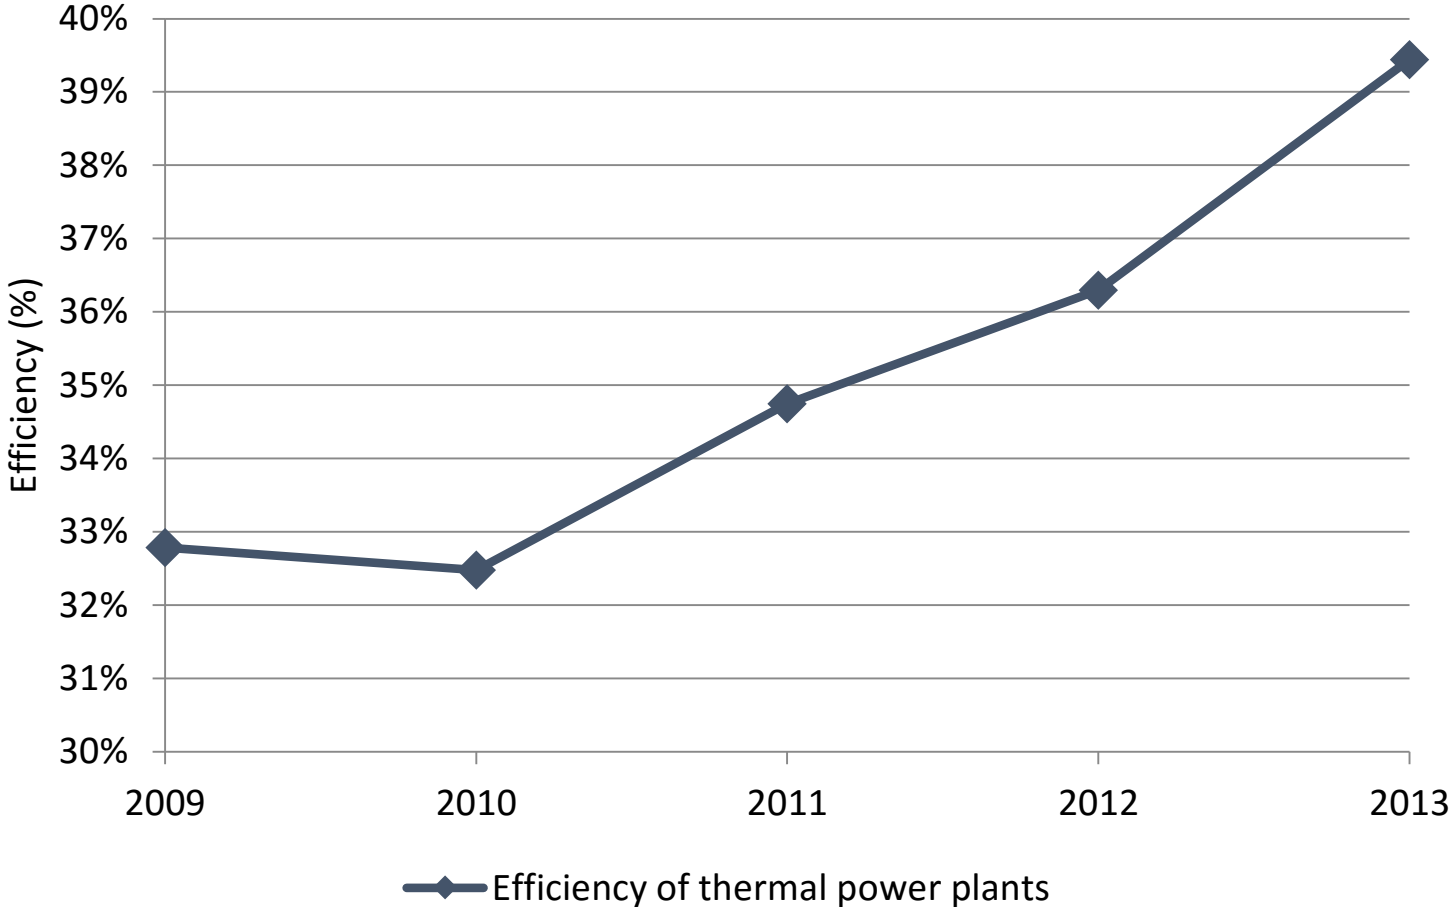

- Losses in transformation systems including losses in electricity generation, transmission and distribution

Supply efficiency: ECO3 - Efficiency of energy supply

UNIVERSITY OF LEEDS

Senegal

Data taken from WEC: www.worldenergy.org/data/efficiency-indicators

Supply efficiency: ECO3 - Efficiency of energy distribution

UNIVERSITY OF LEEDS

Ghana

Use and production patterns (3)

UNIVERSITY OF LEEDS

Production

ECO4 Reserves-to-production ratio

- Proven recoverable reserves
- Total energy production

ECO5 Resources-to-production ratio

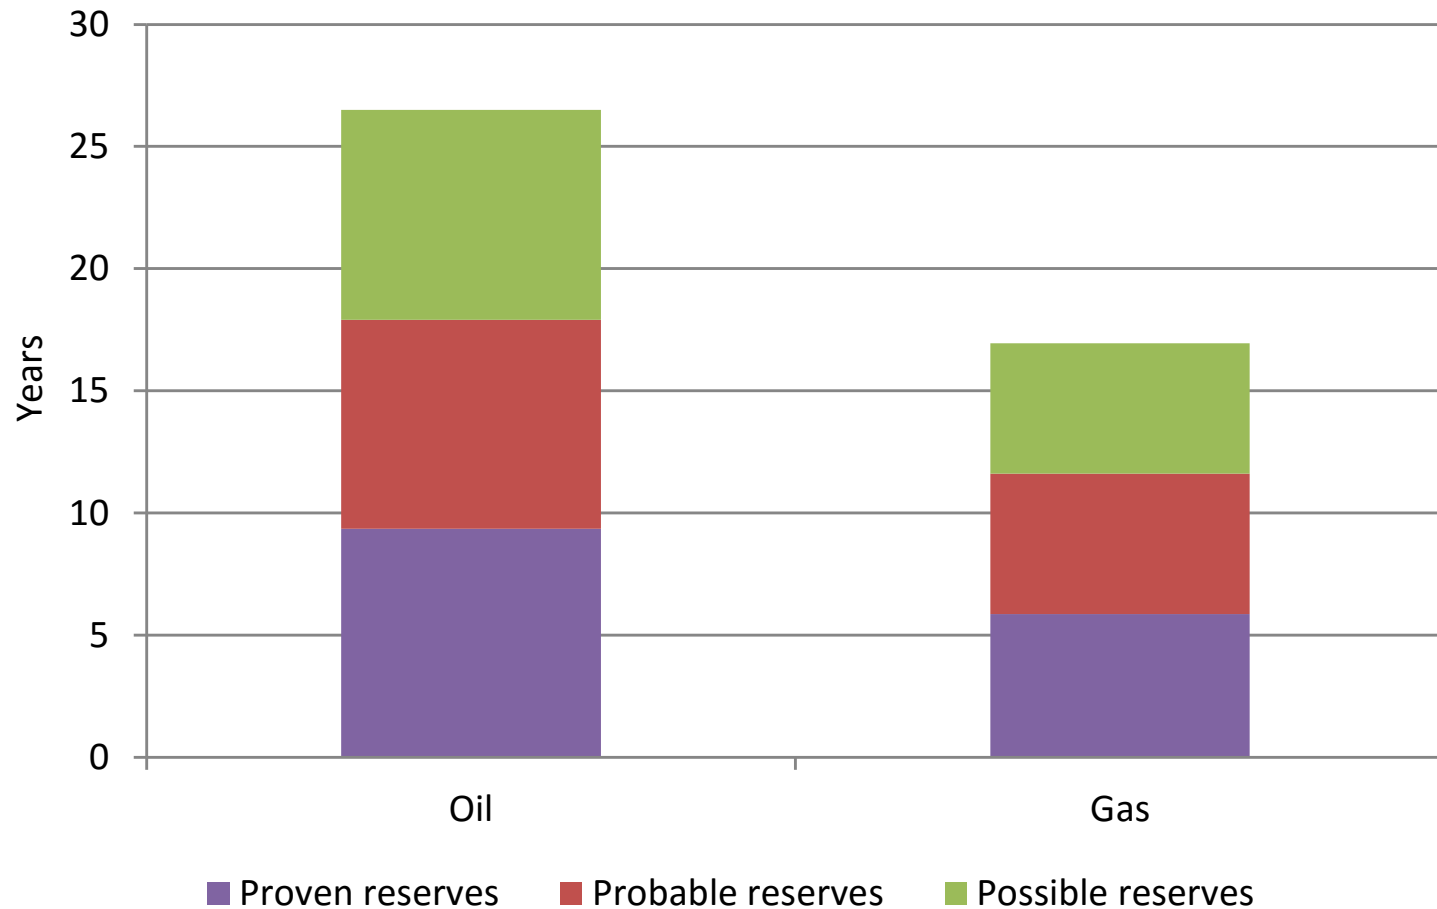

- Total estimated resources
- Total energy production

Production: ECO4 - Reserves to production ratio

UNIVERSITY OF LEEDS

United Kingdom

Use and production patterns (4)

UNIVERSITY OF LEEDS

End Use

ECO6 Industrial energy intensities

ECO7 Agricultural energy intensities

ECO8 Service/ commercial energy intensities

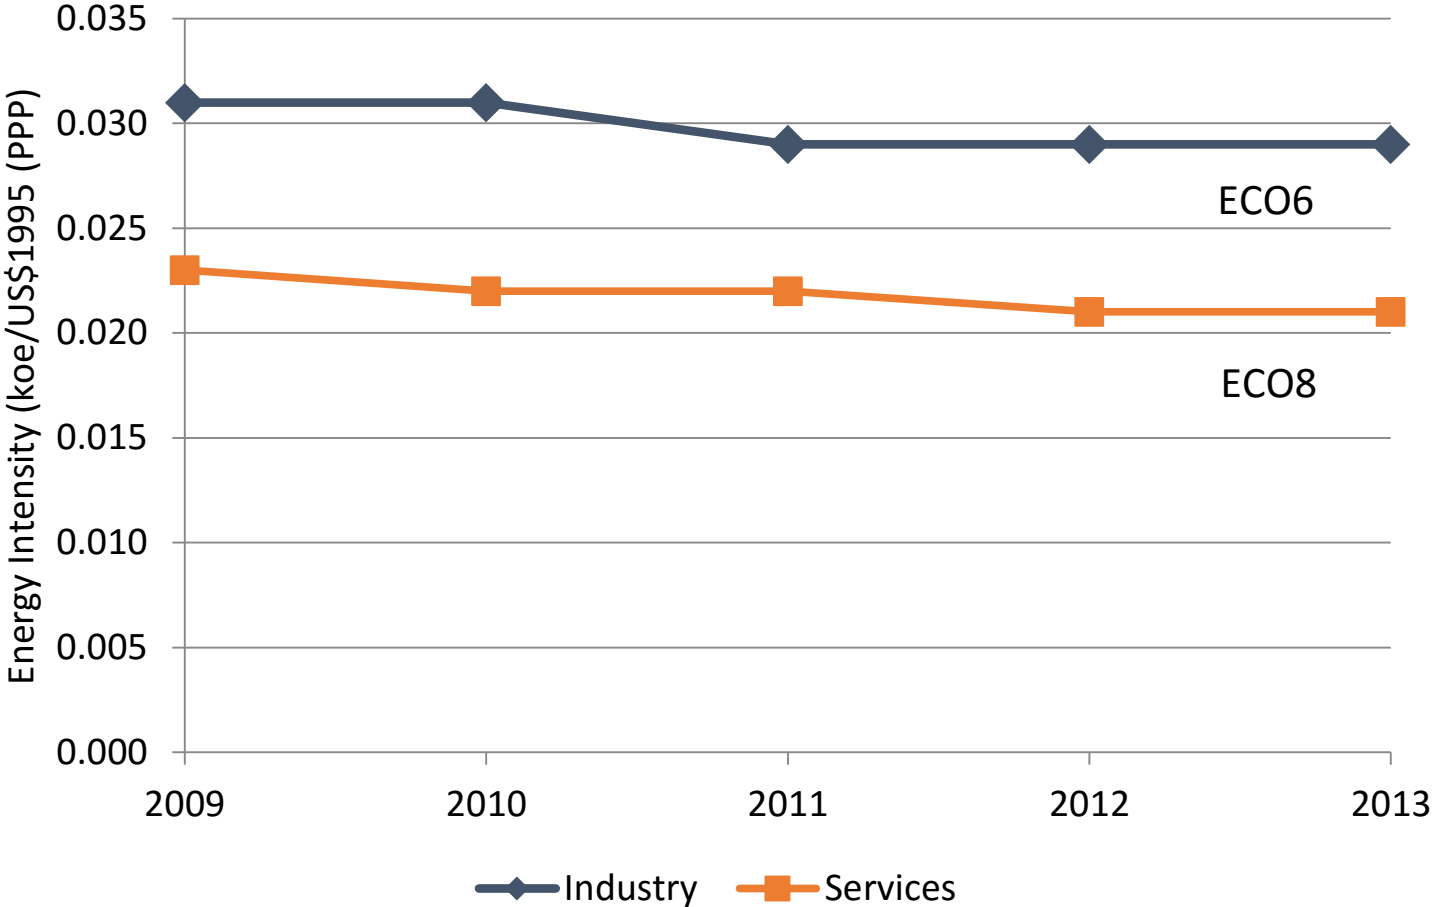

- Energy use in industrial or commercial or agricultural sector
- Corresponding value added

End Use: ECO6 & ECO8 – Industrial and services energy intensities

UNIVERSITY OF LEEDS

Cameroon

Data taken from WEC: www.worldenergy.org/data/efficiency-indicators/

End Use (cont.)

ECO9 Household energy intensities

- Energy use in households and by key end use
- Number of households, floor area, persons per household, appliance ownership

ECO10 Transport energy intensities

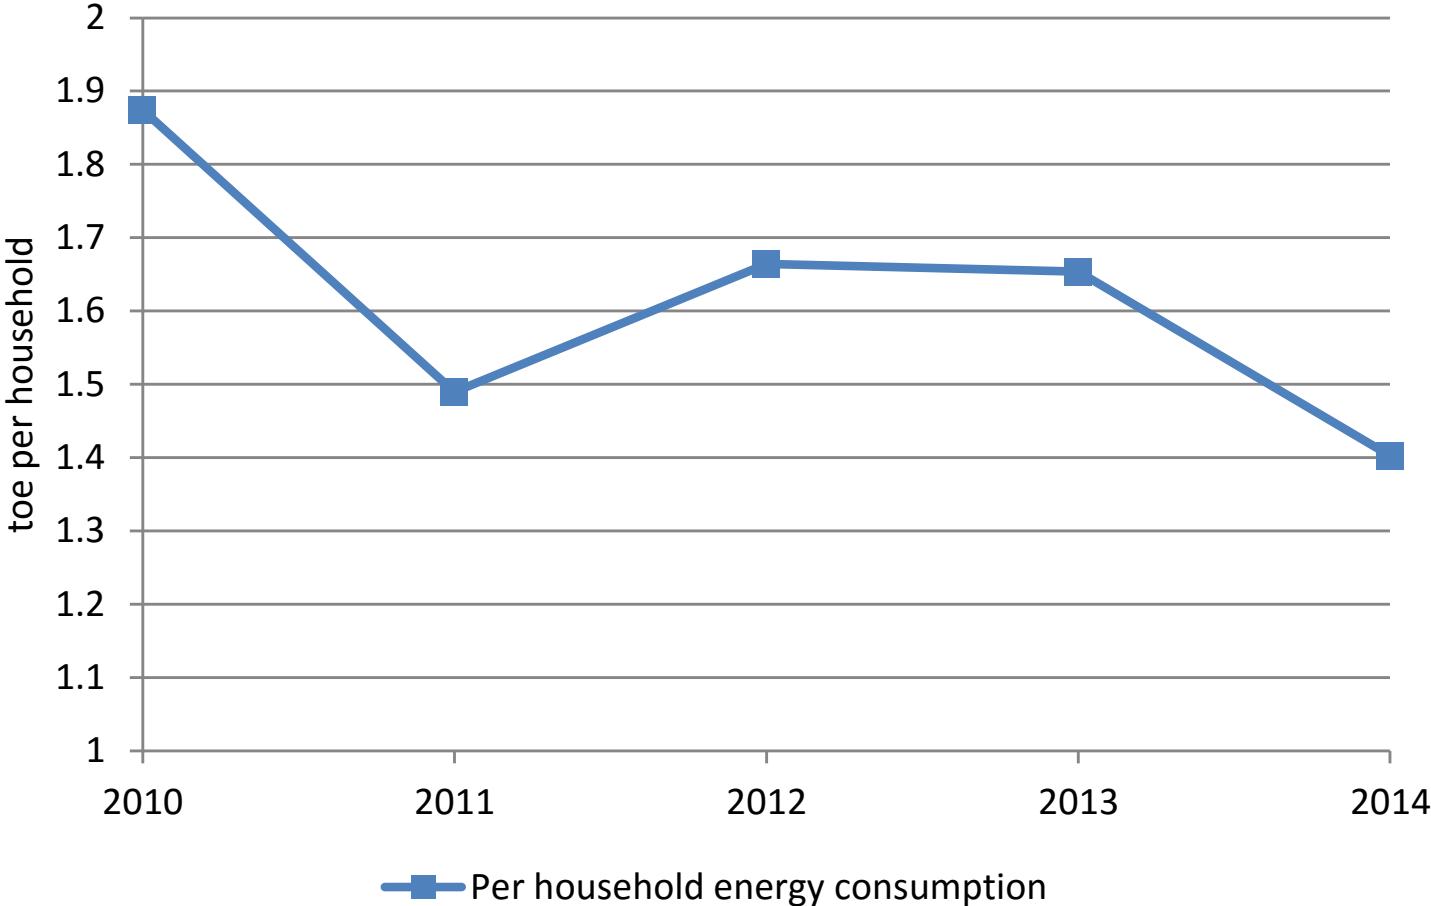

- Energy use in passenger travel and freight sectors and by mode
- Passenger-km travel and tonne-km freight and by mode

End use: ECO9 – Household energy intensity

UNIVERSITY OF LEEDS

United Kingdom

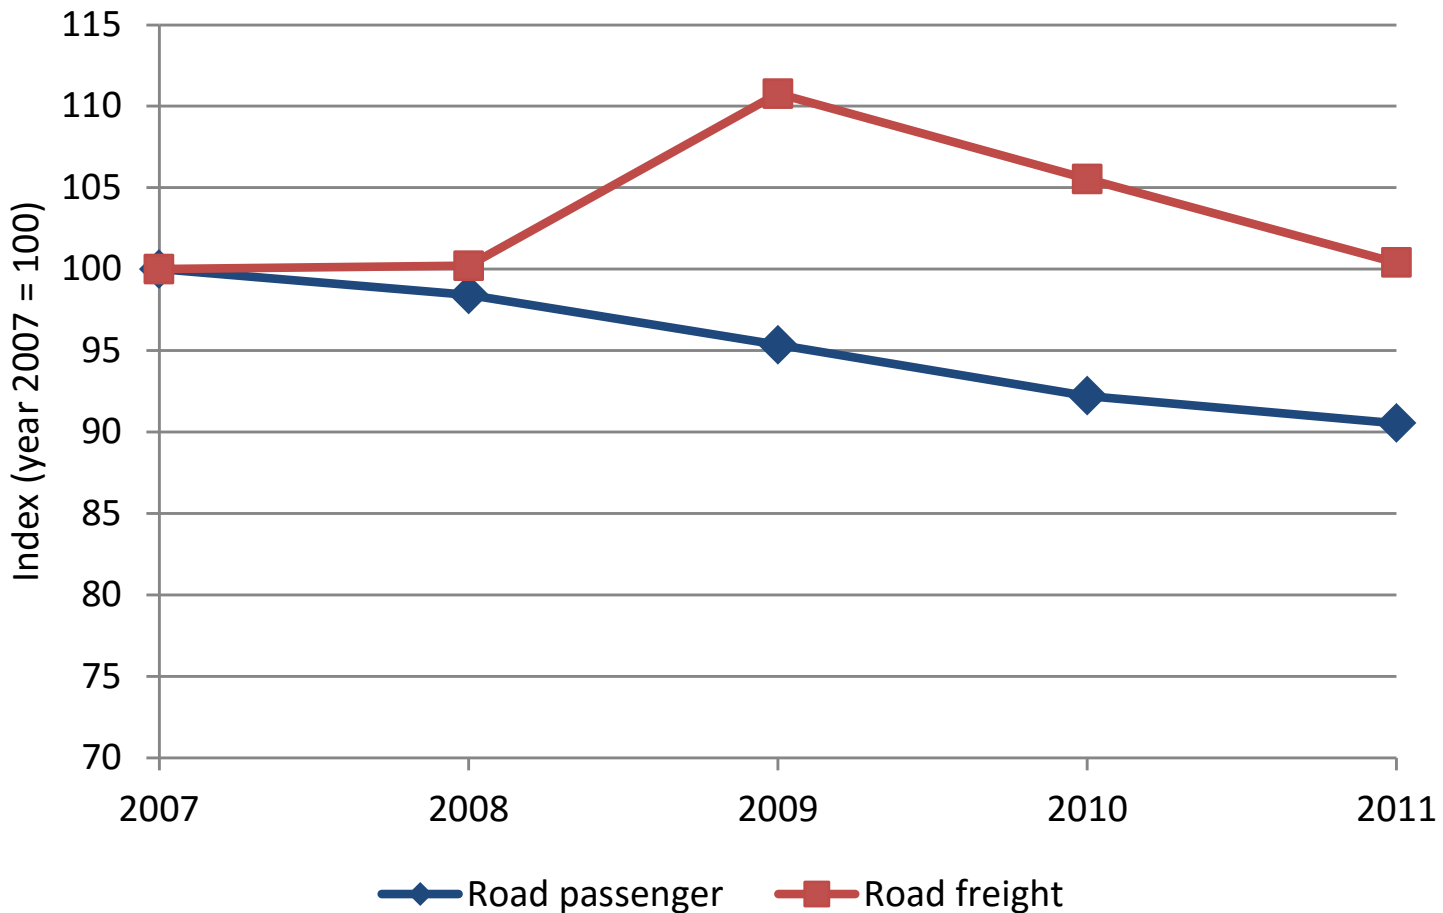

Data taken from Department of Energy and Climate Change (2015) Energy consumption in the UK

End use: ECO10 – Transport energy intensities

UNIVERSITY OF LEEDS

United Kingdom

ECO11 Fuel shares in energy and electricity

- Primary energy supply and final consumption, electricity generation and generating capacity by fuel type
- Total primary energy supply, total final consumption, total electricity generation and total generating capacity

Diversification: ECO11 – Fuel shares in TPES

UNIVERSITY OF LEEDS

Diversification: ECO11 – Fuel shares in final consumption

UNIVERSITY OF LEEDS

ECO12 Non-carbon energy share in energy and electricity

- Primary supply, electricity generation and generating capacity by non-carbon energy
- Total primary energy supply, total electricity generation and total generating capacity

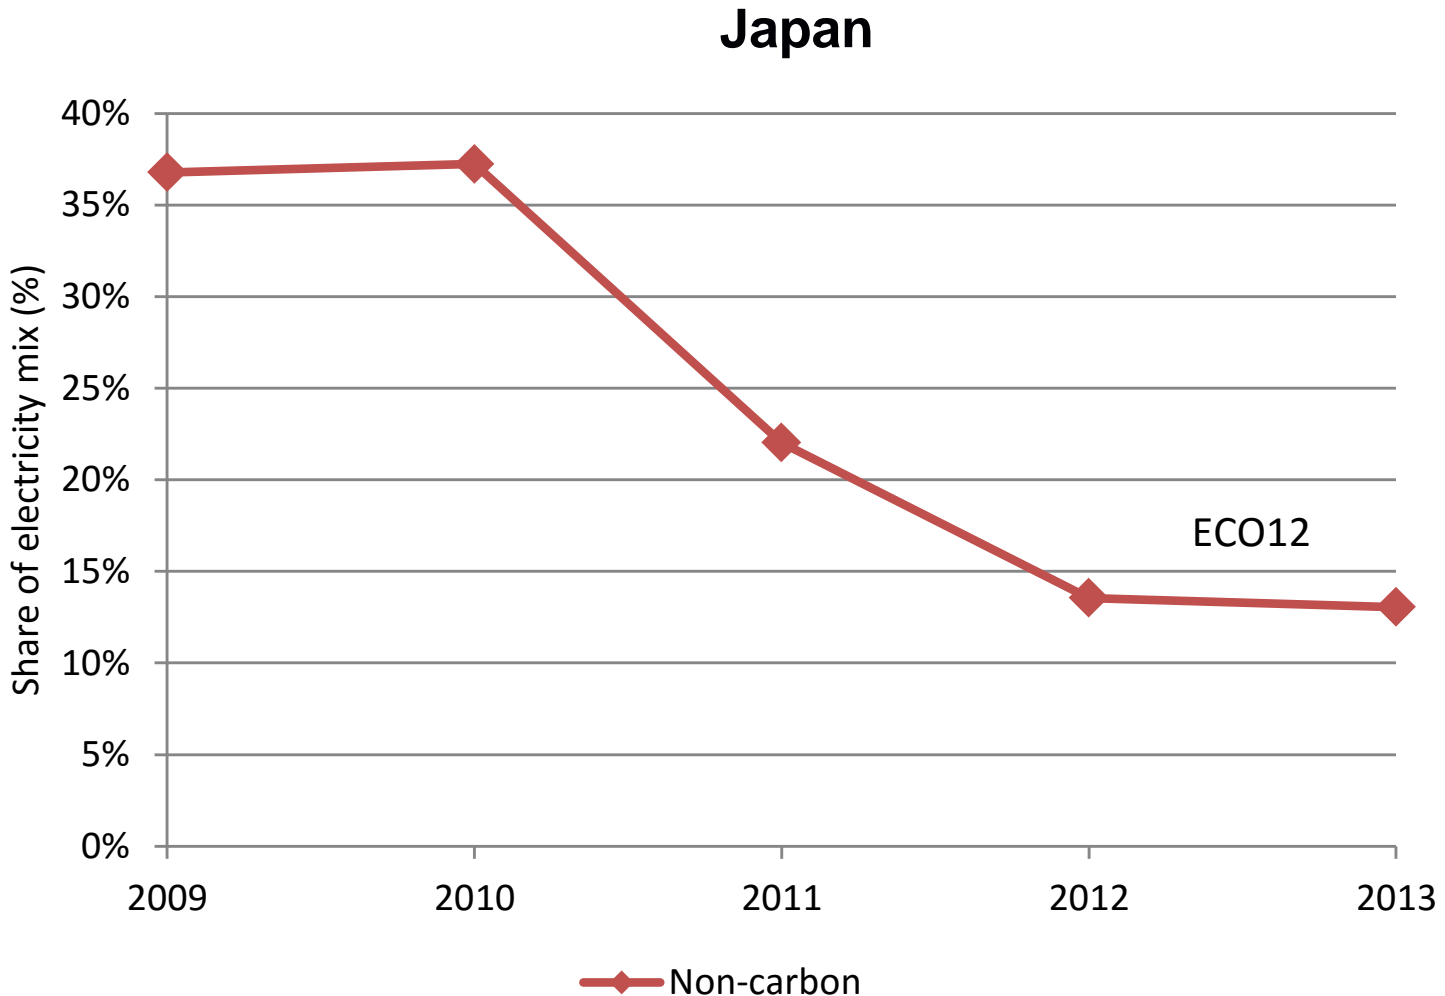

ECO13 Renewable energy share in energy and electricity

- Primary energy supply, final consumption and electricity generation and generating capacity by renewable energy
- Total primary energy supply, total final consumption, total electricity generation and total generating capacity

Diversification: ECO12 – Non-carbon energy share in electricity

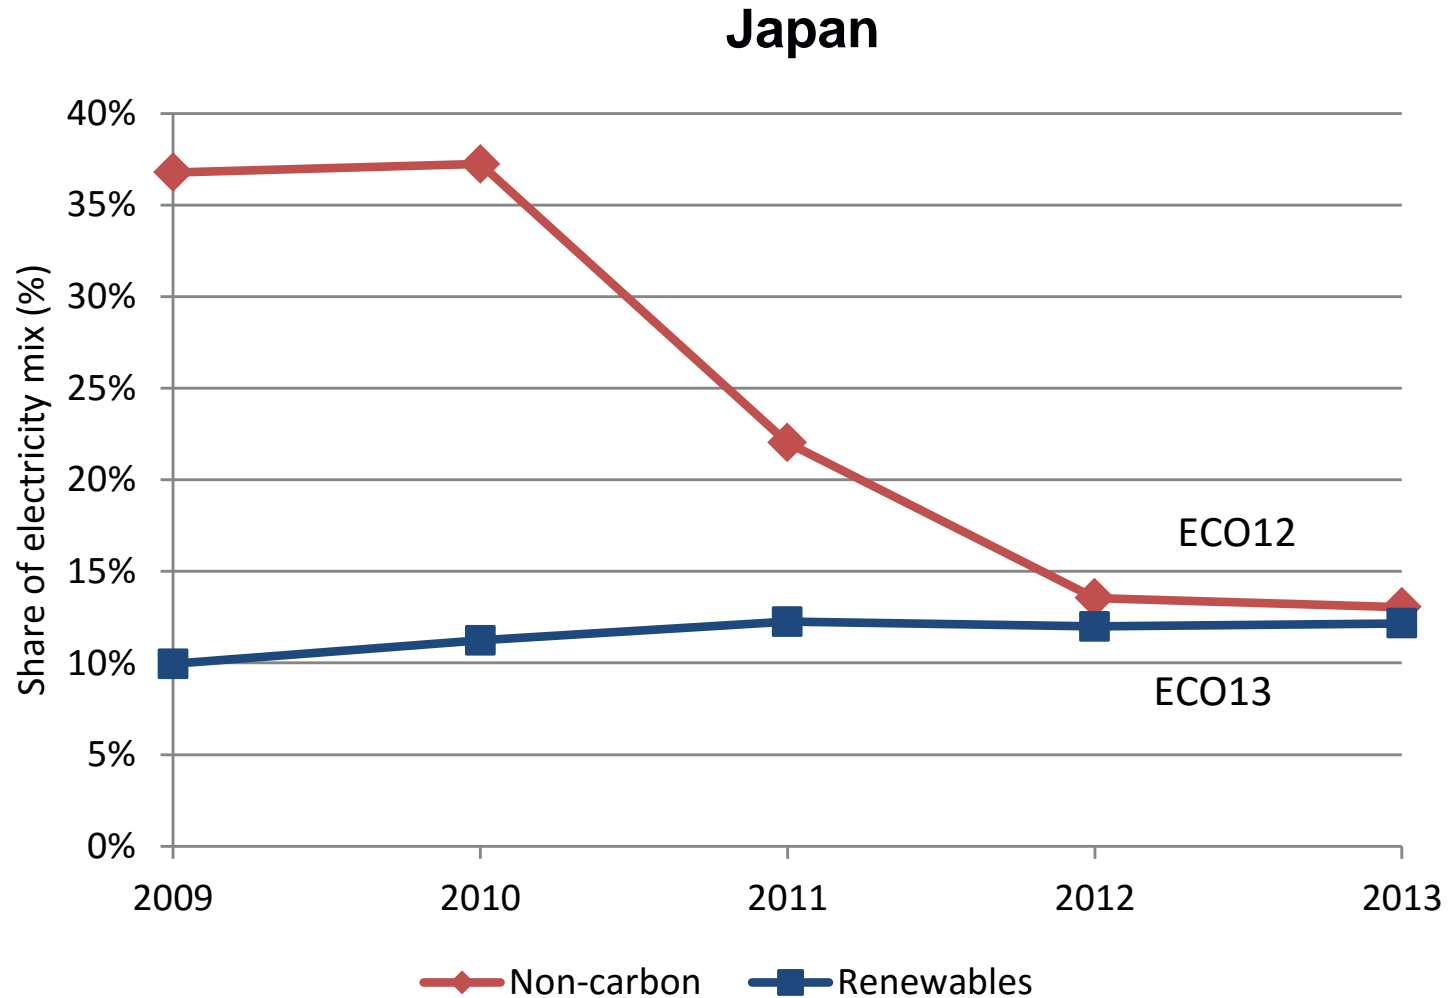

UNIVERSITY OF LEEDS

Diversification: ECO13 – Renewable energy share in electricity

UNIVERSITY OF LEEDS

Prices

ECO14 End-use energy prices by fuel and by sector

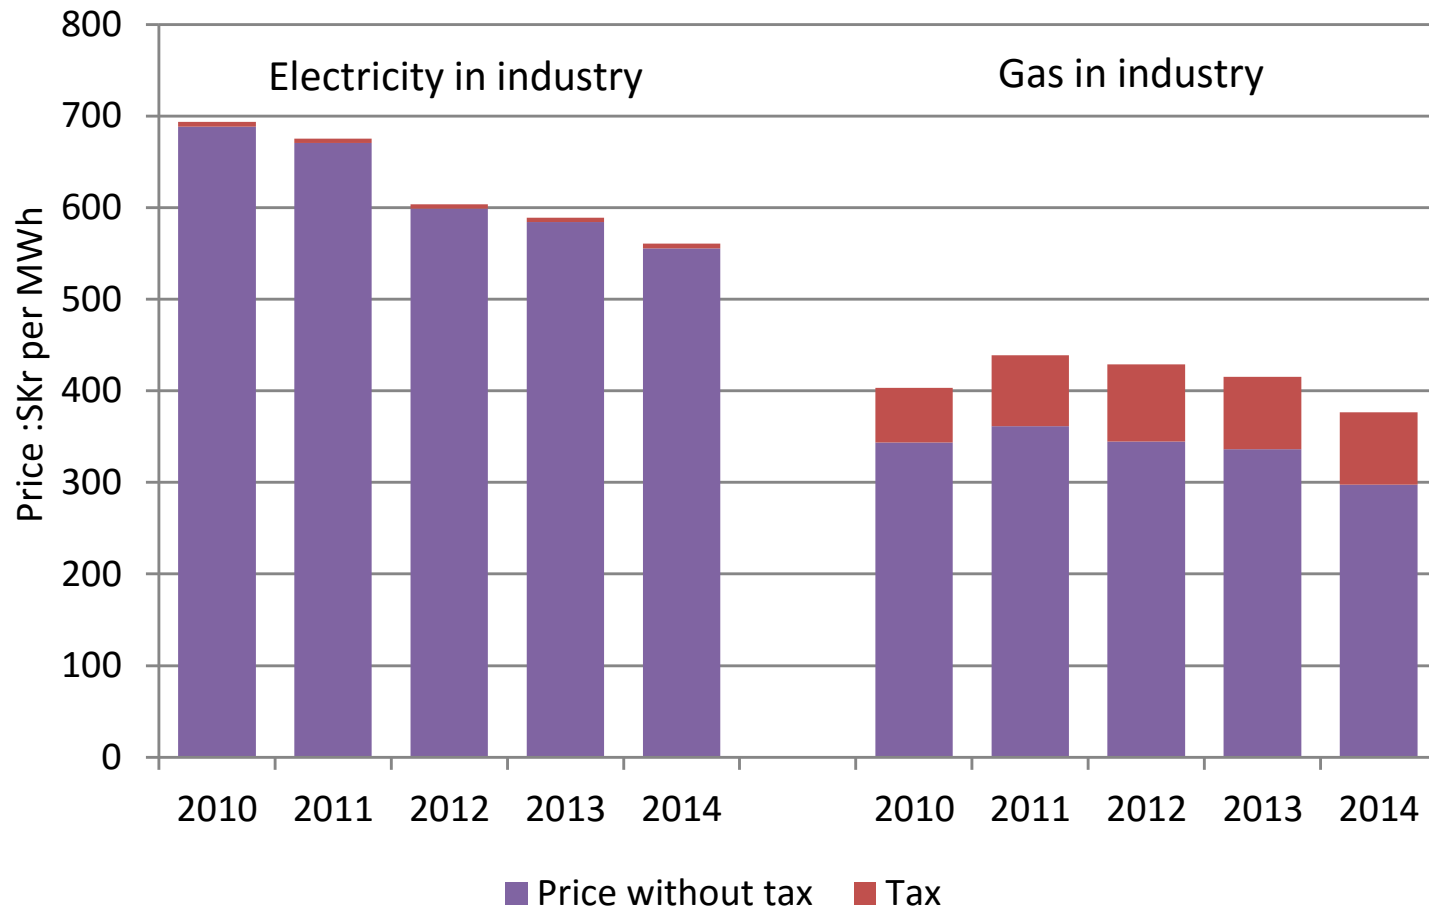

- Energy prices (with and without tax/subsidy)

Use and production patterns: ECO14 - End use energy prices

UNIVERSITY OF LEEDS

Sweden

Imports

ECO15 Net energy import dependency

- Energy imports
- Total primary energy supply

Strategic Fuel Stocks

ECO16 Stocks of critical fuels per corresponding fuel consumption

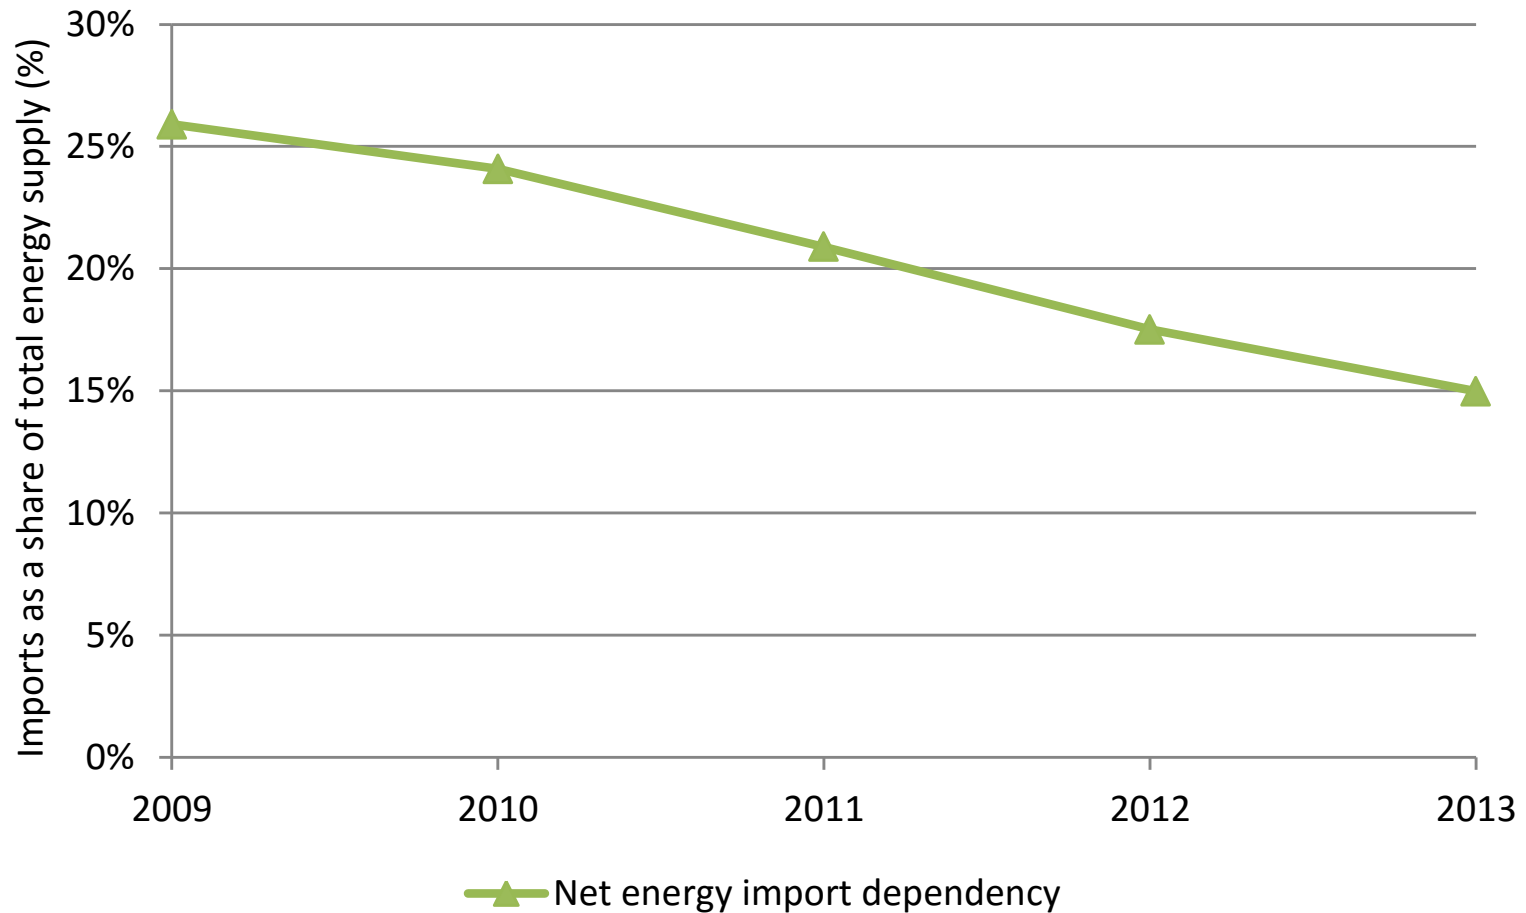

- Stocks of critical fuel (e.g. oil, gas, etc.)
- Critical fuel consumption

Imports: ECO15 - Net energy import dependency

UNIVERSITY OF LEEDS

United States

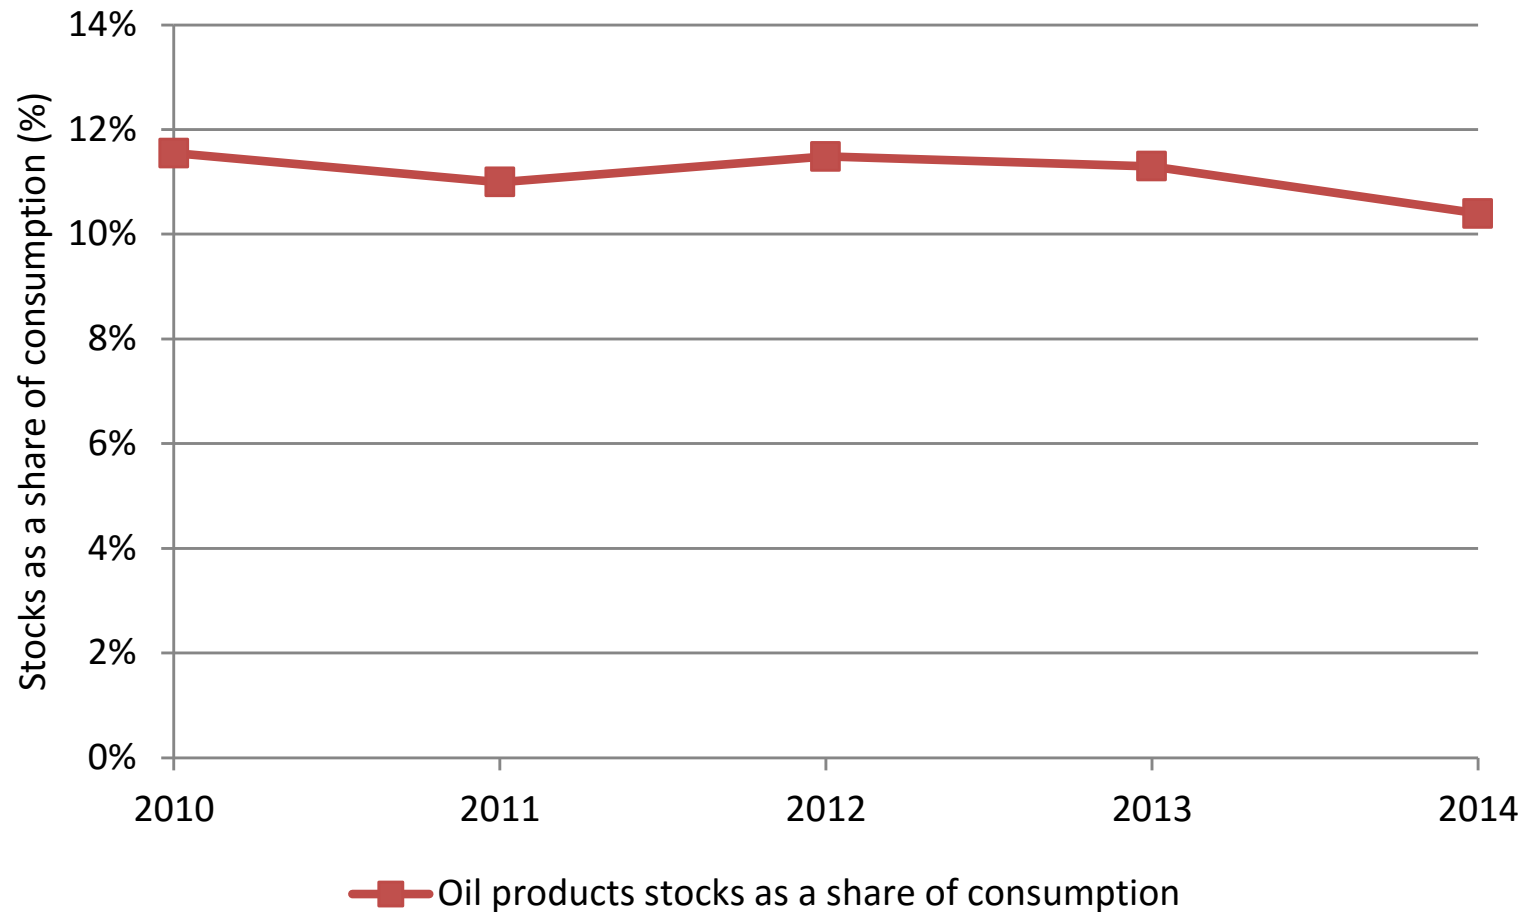

Strategic fuel stocks: ECO16 - Stocks of critical fuels

UNIVERSITY OF LEEDS

United Kingdom

- Energy indicators covering the economic dimension should be used together with those examining the social and environmental dimensions.
- Unlike some other indicators, the EISD are meant to be used for national analyses.
- Not all indicators will be appropriate for all countries.
- Not all countries will currently have the data to construct all indicators.
- They are intended to help countries address their energy challenges in the most appropriate way.
